Introduction

Natural Resources

~~stocks of the nature, useful to the man kinds are called natural resources. They are air, water, soil, mineral, coal, petroleum, Animals & plants. Today the basic needs of the life are fulfilled by material present in nature. We manipulate these Resources to produce whatever is required. The primitive Human beings had used only those resources that supported their life. The growing population, industrialization consequent urbanization has compelled us to over exploit these natural resources.~~

Classification of Natural Resources.

~~Natural resources are broadly classified into two types~~

- 1] Nonrenewable Natural Resources.
- 2] Renewable Natural Resources.
