Abstract :-

Waste electronic and electrical equipment (weee) is becoming major threat to the whole world. Its toxic emissions mixed with virgin soil and air and causing harmful effects to the entire biota either directly or indirectly. Direct impact include release of acids, toxic compounds including heavy metals, carcinogenic chemicals and indirect effect such as bio magnification of heavy metals. Many private firms are involved in collecting, dismantling, separation and exporting e-wastes to recyclers. However, strict regulations are currently being followed as on approval of such firms such as e-wastes, e-steward certification by Basel action network in US, they also involved in public awareness programs; this review is based on collected information from various journal articles, websites including the technical note by Greenpeace international. Further, it analyzes the current progress on e-waste management worldwide.

Recycling of e-waste scrap is pollution the water, soil, and the air. Burning to retrieve metal from wires and cables has led to the emission of brominated and chlorinated dioxins as well as carcinogens which pollute the air thereby cause cancer in humans and animals.
