Hazardous Waste Reduction Plan

Our College is committed to the protection of human health and the environment. To meet these commitments, the college strongly encourages its employees to utilize waste reduction techniques to reduce the volume and toxicity of chemical wastes produced at the college.

Common Waste Minimization Techniques

- 1. In Chemistry Laboratory we do not mix wastes. Especially do not mix hazardous wastes with non-hazardous wastes. Hazardous waste is collected in separate red color buckets at the time of practicals which was neutralized by using NaHCO_3 and diluted by adding excess of water and then mixed it with other wastewater.*
- 2. **Product Substitution:** substitute non-hazardous or less toxic materials in your chemical processes and experiments. Some examples are The use of non-halogenated solvents in chemical reactions.*
- 3. **Process Modification:** to the extent that it does not adversely affect instruction or service, the Chemistry department is requested to modify experimental standard processes to decrease the number of hazardous chemicals used and generated.*
- 4. In Chemistry Laboratory, microanalysis techniques can greatly reduce the amount of waste generated.*
